A Commitment to Supporting Leading Innovators Globally

2024 Year-In-Review

“Advancing innovation is essential to our goal of transforming standard of care. That’s why we continue to invest in novel ideas where we see future potential for patients.”

— Roopal Thakkar, MD
Executive Vice President,
Research & Development,
Chief Scientific Officer

A letter to our readers

AbbVie Ventures is dedicated to investing in science, people and ecosystems to shape tomorrow’s cures, driven by today’s innovators. The year 2024 proved to be a pivotal one for us, as we actively executed our strategic vision to expand our global innovation access and enhance our on-the-ground presence. By embracing our invest-to-partner ambition, we are positioning AbbVie as the preferred partner for leading investors, company builders and innovators within the world’s dynamic biotech ecosystems.

In 2024, we proactively invested over \$60 million across five operational equity verticals, covering all of AbbVie’s core therapeutic areas. Our initiatives included business incubation, direct and follow-on investments, business development partnerships and strategic R&D portfolio divestitures. We were excited to welcome ten new companies into the AbbVie Ventures portfolio, while also providing continued support to our existing companies through follow-on capital. Remarkably, several of our portfolio companies achieved significant milestones, with five initiating first-in-human trials for novel first-in-class biology.

Moreover, we successfully established three new limited partnership positions with leading early-stage institutional life science funds across North America, Europe and Asia, further enhancing our global footprint. Our commitment to fostering innovation is exemplified by our new Golden Ticket business incubation partnerships in emerging global biotech ecosystems. We are particularly thrilled about our strategic global network partnership with Mission BioCapital and the University of Toronto SpinUp Accelerator, among others.

Across all these initiatives, we are leveraging our expertise in drug discovery, development and commercialization to support our partners,

demonstrating strong engagement as investors, even at the earliest stages. We would also like to celebrate the success of our former portfolio companies following their successful exits. Congratulations to the teams at Jnana Therapeutics (acquired by Otsuka) and Morphee Therapeutics (acquired by Eli Lilly) for securing futures that advance their pipelines, bringing their medicines closer to the patients who need them.

As we move into 2025 and beyond, we remain committed to deepening our relationships worldwide by investing in transformational first-in-class science and technology. We hope you enjoy learning about our recent accomplishments, and we look forward to connecting with you.

Sincerely,

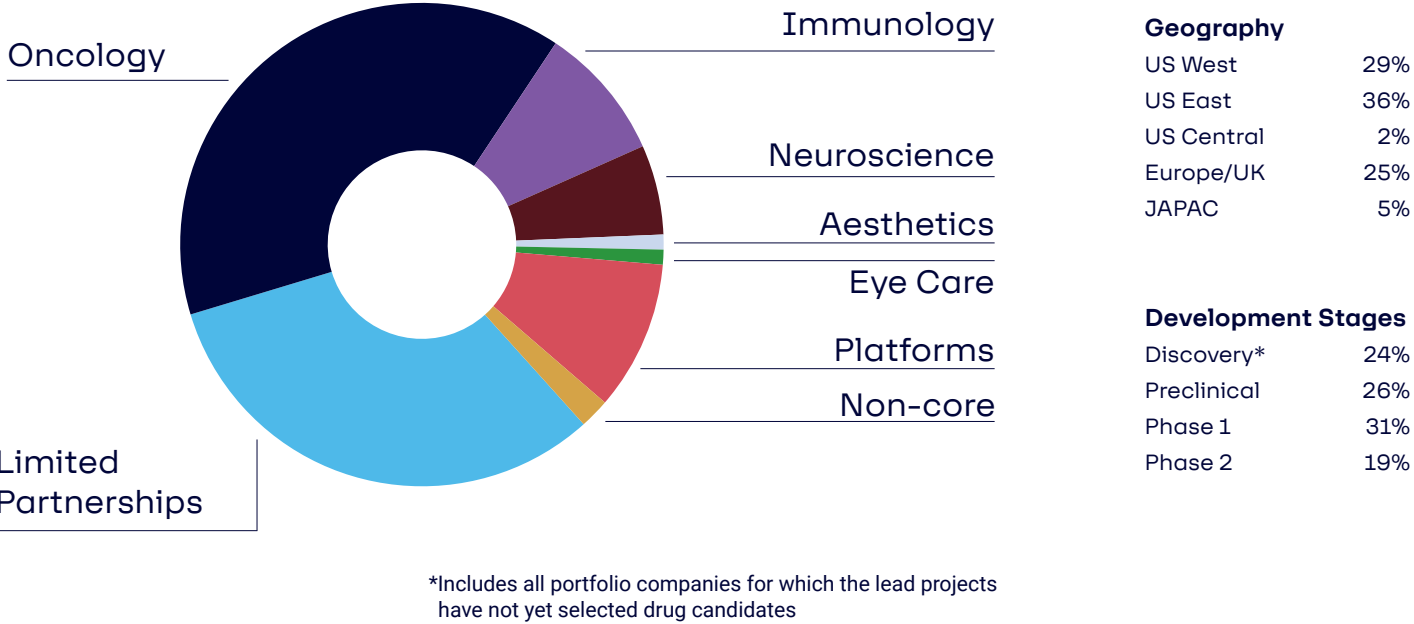

A handwritten signature in dark ink, appearing to read 'Chris Schubert', written in a cursive style.

A diverse and evolving portfolio

Investing since 2009, we focus exclusively on novel, transformational therapeutics at discovery and preclinical stages

Oncology

- ▶ Heme and solid tumor targeting/selective killing
- ▶ *In vivo/in situ* CAR
- ▶ Novel approaches to hard-to-drug targets in oncogenic signaling

Immunology

- ▶ Cell/Tissue targeting
- ▶ Tolerance induction
- ▶ Tissue homeostasis
- ▶ TH2 cell biology
- ▶ Non-viral genetic medicine, including *in vivo* CAR

Neuroscience

- ▶ Psychiatry
- ▶ Migraine
- ▶ Neurodegenerative movement disorders
- ▶ New targets, biomarkers and BBB-enabling technologies

Aesthetics

- ▶ Regenerative medicine
- ▶ Hair growth
- ▶ Fat reduction

Eye Care

- ▶ Back-of-the-eye retinal biology
- ▶ Vision restoration
- ▶ Neuroprotection

Therapeutic Modalities/ Platform Technologies

- ▶ Small Molecules
- ▶ Biologics (incl ADCs, T Cell Engagers)
- ▶ Protein Degradation
- ▶ RNA, RNA degraders
- ▶ Genetic Medicine

We engage globally and build locally

To reinforce our reputation as partner of choice, AbbVie Ventures engaged with innovation ecosystems globally to source investment opportunities

Recent partnership highlights

"BioInnovation Labs, LabCentral and MBC BioLabs Announce Strategic Partnership with AbbVie to Boost Innovation in key biotech clusters in the US and Europe."
— BioLabs Network

"AbbVie joins other pharmaceutical, venture fund and biotechnology partners supporting BaseLaunch's company creation endeavours."
— BaseLaunch

"AbbVie and SpinUp Foster Canadian Life Sciences Innovation with the Launch of the AbbVie Biotech Innovators Award"
— University of Toronto, Mississauga SpinUp Accelerator

Additional new portfolio entrants in 2024

Parvus Therapeutics is developing Navacim platform: presentation of peptide-MHCs to T cells to induce Treg differentiation.

Sionna Therapeutics (NASDAQ: SION) is advancing a cystic fibrosis-focused pipeline featuring novel mechanisms of action with the potential to redefine standard of care.

Leveraging organ rejection in cancer and "painting" tumors with glycosylation markers mimic the biology of hyperacute transplant rejection, leading to immune rejection of tumors.

A localized fat-killing genetic medicine, proteolipid vehicles act as carriers for genetic cargos with optimized fusogenic activity, allowing for highly localized activity.

Immunology Stealth NewCo is developing a novel antigen-agnostic approach for rheumatoid arthritis and other inflammatory diseases.

Genetic Medicine Stealth NewCo's mission is to develop medicines enabled by extrahepatic cell-specific delivery of RNAs.

Immunology Stealth NewCo is identifying dysfunctional signaling axes in gastrointestinal disease based on human biology drugged via an engineered-bug-as-drug approach.

Spotlight on new portfolio additions

AbbVie Ventures accelerates innovation through the support of leading innovators, company builders and entrepreneurs

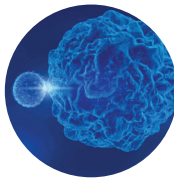

Cephagenix

Pursuing novel biology in migraines

Cephagenix is exploring vascular subtype-specific small molecule inhibitors of KATP channels for the acute treatment of migraines. Despite recent approvals, including AbbVie's brands Ubrelvy, Qulipta and Botox, there remains significant unmet medical need, and new mechanisms beyond CGRP and tryptans represent significant innovation in the field.

2023
Initial contact via Search & Evaluation at BioEurope. Continued discussions led to a refined research plan and the emergence of a lead investor.

2024
AbbVie participated in the Seed Extension Financing to enable Cephagenix to derisk a potential first-in-class mechanism in migraine.

EvolveImmune

T cell engagers synergistic with CD2 costimulation

EvolveImmune is developing multispecific T cell engagers against tumor-associated antigens, coupled with CD2 co-stimulation. By engaging these pathways, the approach seeks to overcome T cell exhaustion, overcoming the disadvantages of first-gen T cell engager or cell therapy platforms by enhancing the potency and durability of anti-tumor immune responses.

2023
Initial contact with company representatives at JP Morgan Healthcare Conference. Continued discussions throughout the year, with regular data updates.

2023
EvolveImmune announced its Series A financing. AbbVie's interests beyond the platform potential exceeded the constraints of a venture investment and drove business development process.

2024
AbbVie and EvolveImmune announced a discovery partnership with equity investment.

Third Arc Bio

T cell engagers synergistic with CD28 costimulation

Third Arc Bio is developing multispecific T cell engagers for oncology and immunology. In oncology, the company is rationally selecting tumor-associated antigen pairs that can be targeted synergistically, with engagement of CD3/CD28 to conditionally activate T cells only when all four targets are present in proximity.

2022
Company is founded by industry veterans, including Sanjaya Singh, PhD, a coinventor of Skyrizi, one of our most impactful brands.

2024
AbbVie participated in the oversubscribed Series A Round that accentuated the company's emergence from stealth.

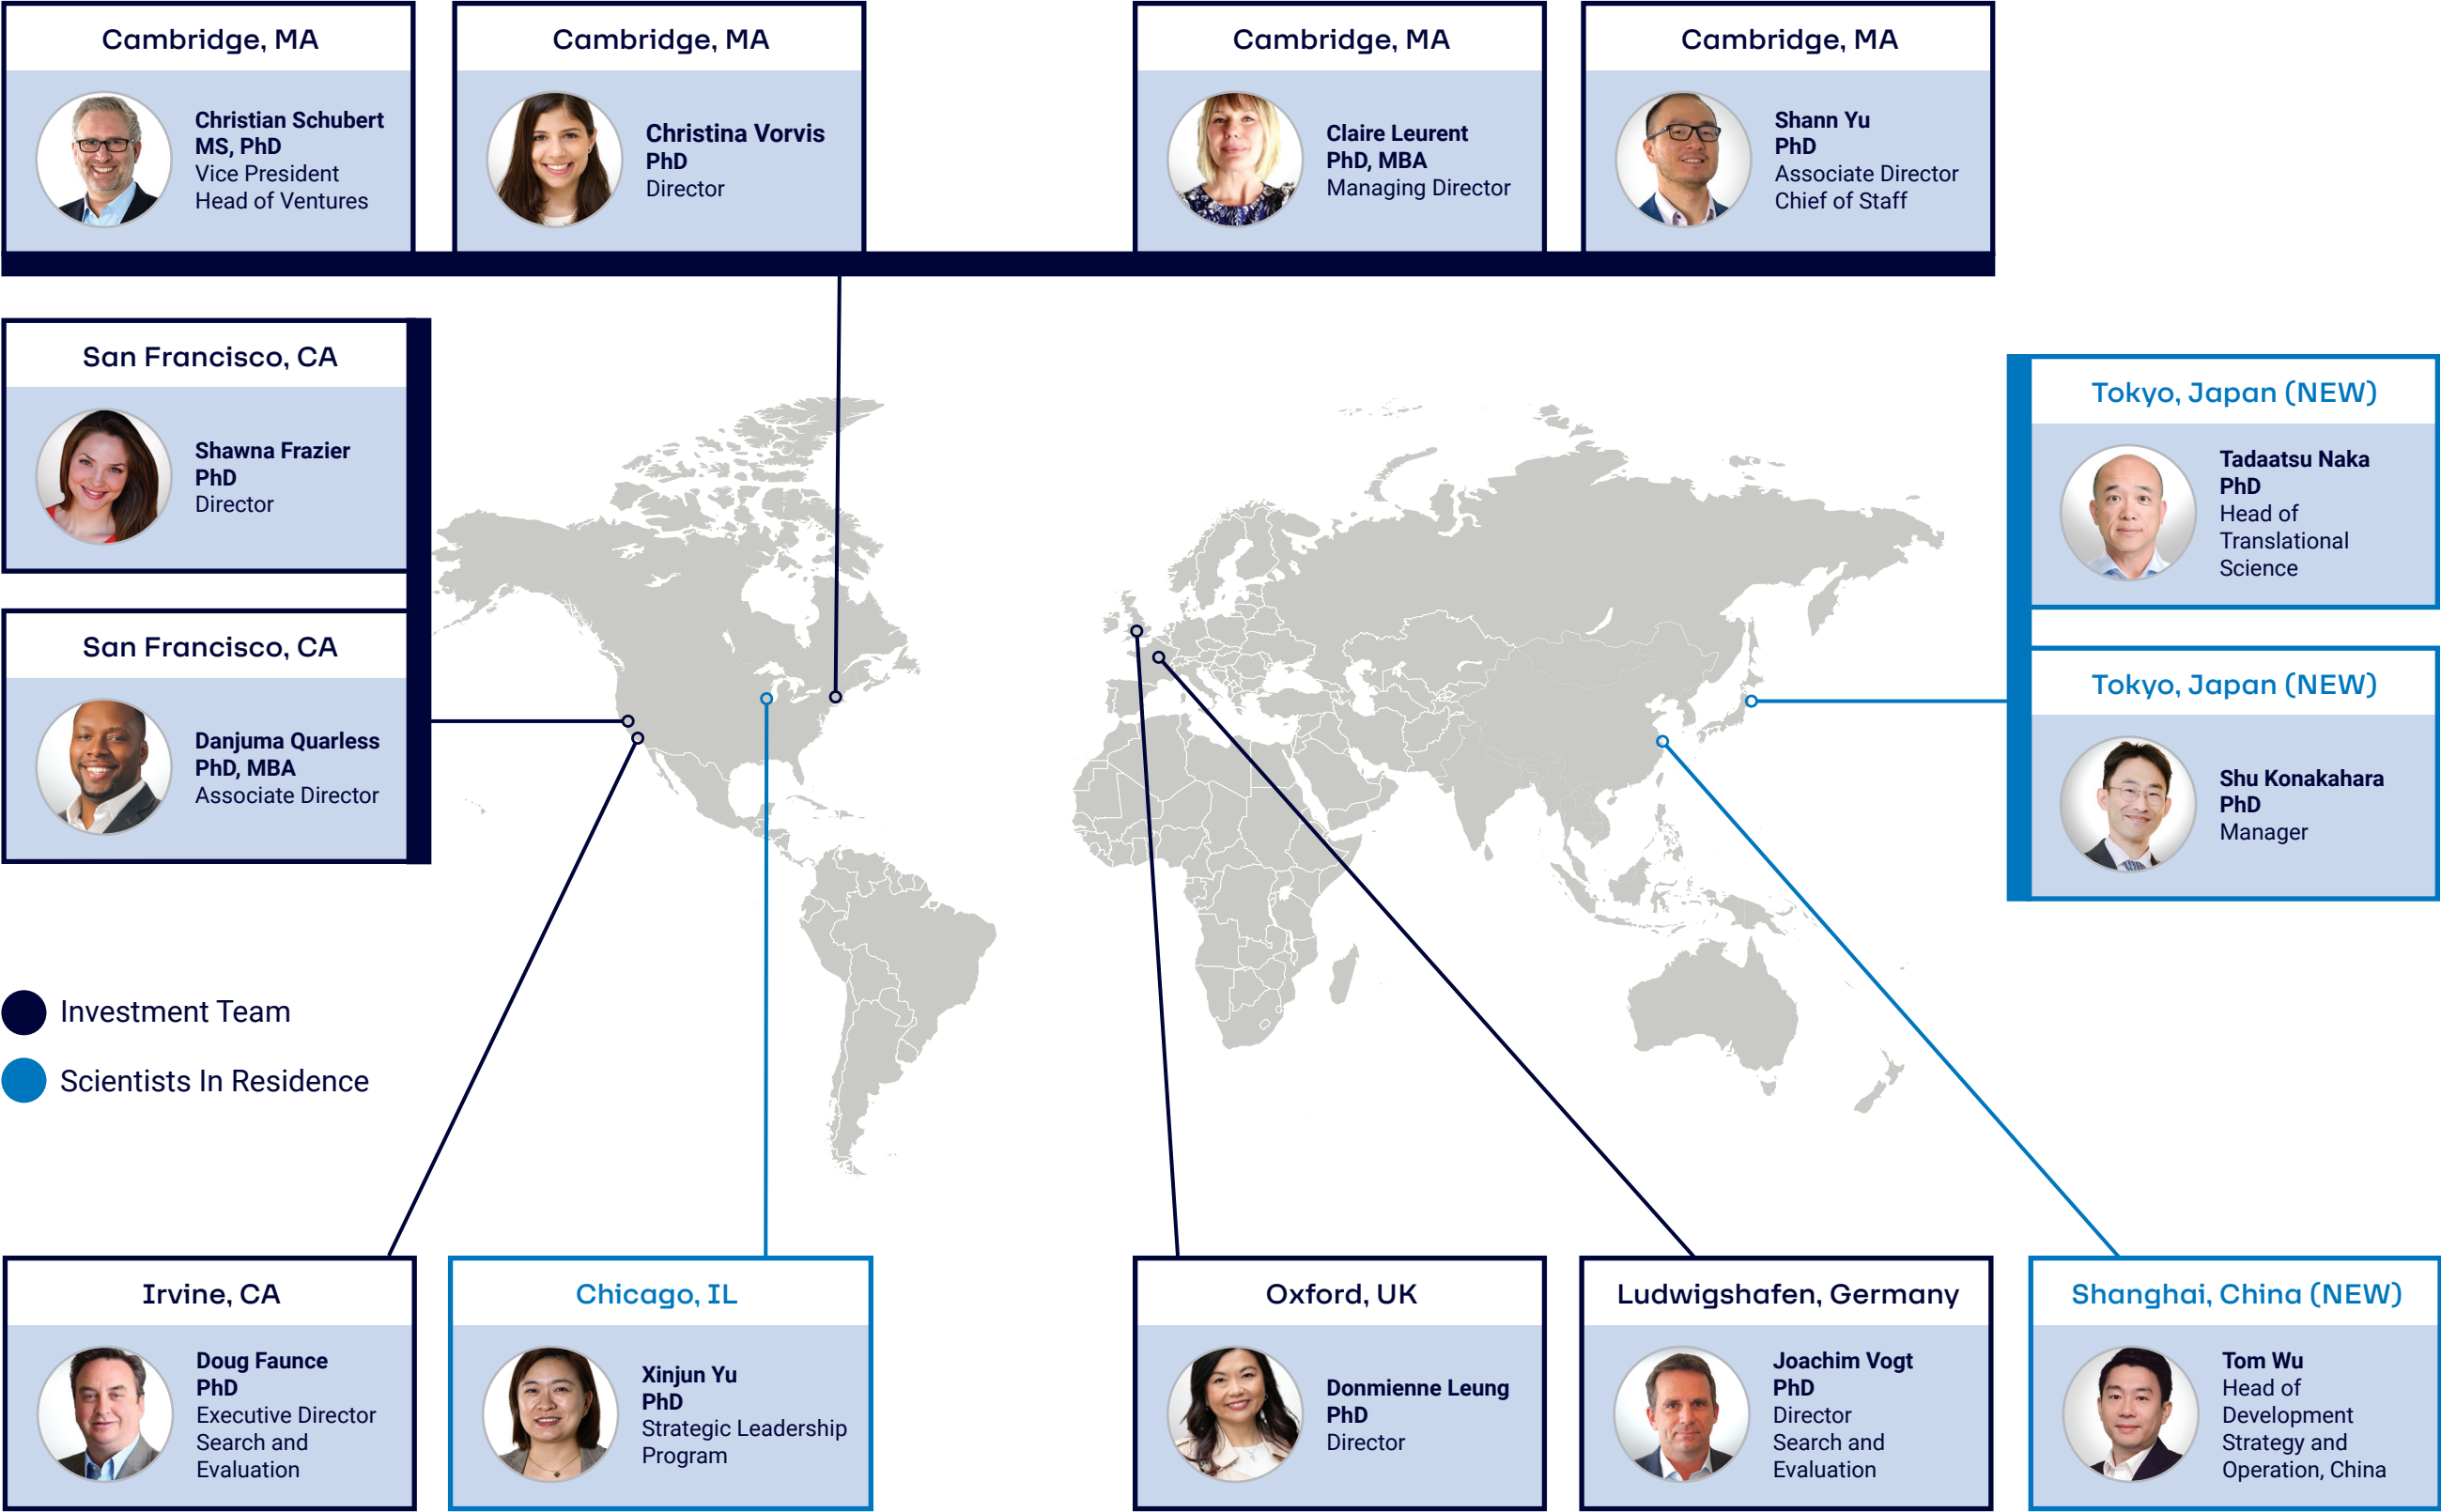

2025
Third Arc announced that the first program entered the clinic – a CLDN6xCD3 bispecific T cell engager.

Our experts

Engaging ecosystems globally, AbbVie Ventures is focused on cutting-edge science and has the depth of background—both academic and applied— to understand how innovative approaches can be developed into novel medicines. This unique blend of business and scientific acumen is critical to ensure the success of new ventures.

As we scout for innovation and new partnerships that align with our focus areas, our team is ready to meet with you to share capabilities and discuss business opportunities.

Innovation takes all of us!

“I am thrilled to see Cephagenix’s anti-migraine program attracting interest from leading investors. Our latest work targeting vascular KATP channels may provide a transformative treatment to [migraine].”

— Professor Jes Olesen, Co-founder, Cephagenix.

Outlook for 2025

- Expand reach and connectivity worldwide
- Grow the portfolio by investing in transformative early-stage science with an invest-to-partner aspiration
- Continue to foster a diverse and inclusive portfolio and team
